

## WebGENCAT™ 3.6.0 Release Notes

*(May 23<sup>rd</sup>, 2006)*

WebGENCAT 3.6.0 is a major update to previous versions. It ensures greater stability and uptime, better performance, more efficient use of memory, and an easier installation procedure. This version also provides interfaces to outside technologies that developers can access via Ajax or other XML-parsing technologies.

### **New features/enhancements:**

- Greater stability, particularly with respect to back-up and restore procedures.
- Greatly improved response time performance for most activities.
- Greatly improved system start-up times.
- Multiple read-only servers are supported.
- Better performance when many applications are running in tandem.
- Backups no longer require shutting down the entire system.
- Backup/refresh capabilities are now built directly into WebGENCAT.
- Long batch processes can be scheduled for specific times of day.
- Control panels are now customizable with Cascading Style Sheets (CSS)
- A new, simpler installation procedure.
- WebGENCAT makes better use of available memory.
- Textual buttons are easier to read.
- Dynamic XML generation for Web developers using Ajax and REST.
- Cleaner default look & feel.
- Integration with Google Maps allows geographic searching.
- WebGENCAT and Tomcat can now be started/stopped with a single shortcut.
- Much more control for system administrators.
